# Yungong Wang

Email: wangyungong0@gmail.com | Phone: +1 626-592-3892 | Pittsburgh, PA

## EDUCATION

**Carnegie Mellon University** Aug 2026 – present
*Master of Science in Electrical and Computer Engineering*
- Relevant Courses: Optimization, Computer System, Computer Architecture and Design

**University of California, Santa Barbara** Sep 2022 – Mar 2026
*Bachelor of Science in Computer Science* ***(GPA: 3.98 / 4.0)***
- Relevant Courses: Artificial Intelligence and Machine Learning, Computer Architecture, Programming Language, Compiler, Operating System, Advanced Application Programming, Data Structure and Algorithm Analysis

## PUBLICATIONS

- SMAC-AST: Automated and Scalable Testbed Generation for the StarCraft Multi-Agent Challenge
  *Xingxing Hong, Yungong Wang, Shengyu Guo, Ye Yuan, Junxi Shu, Wenxin Li*
  (Under Review at AAAI 2027)
- HLSMAC: A New StarCraft Multi-Agent Challenge for High-Level Strategic Decision-Making
  *Xingxing Hong, Yungong Wang, Dexin Jin, Ye Yuan, Ximing Huang, Zijian Wu, Yirui Rao, Wenxin Li*
  (Accepted at AAMAS 2026)

## PROFESSIONAL EXPERIENCE

**The Institute of Artificial Intelligence, China Telecom (TeleAI)** Jun 2026 – Aug 2026
*LLM Post-Training Algorithm Intern* *Beijing, China*
- Designed and implemented hint-augmented methods of on-policy distillation (OPD) for LLM reasoning, improving math reasoning accuracy by 5%

**PwC** Jul 2025 – Sep 2025
*IT Support Intern* *Beijing, China*
- Provided technical support across operating system configuration, hardware diagnostics, and software deployments in an enterprise IT environment

**Minidata** Jul 2024 – Sep 2024
*Machine Learning Intern, Computer Vision* *NYC*
- Developed neural network models for textile defect detection, improving accuracy by 15%

## RESEARCH EXPERIENCE

**Peking University** Jul 2024 – Jul 2026
*Research Assistant* *Remote*
- Developed a benchmark generator for MARL training, combining LLM-based code synthesis with a custom DSL compiling infrastructure to parse, validate, and transform generated code into test scenarios
- Explored LLM-guided decision-making for MARL by leveraging LLM-synthesized reward shaping and action-masking policies, with staged curriculum training over decomposed sub-tasks
- Designed a benchmark to assess high-level intelligence in multi-agent systems, which consists of 15+ test scenarios and supports 21+ mainstream MARL algorithms for evaluation

## ACADEMIC PROJECTS

**Diffusion Model Fine-Tuning**
- Fine-tuned InstructPix2Pix to improve its performance on color modification, using a custom-built dataset and a BERT classifier to preserve the model's original capabilities

**Mini-C Compiler**
- Implemented a compiler for a C-like language in C++, featuring AST construction, semantic analysis, x86-64 assembly code generation, and a garbage collection mechanism

**Operating System Components**
- Implemented core operating system components in C++, including a custom shell, a round-robin multi-threaded scheduler, and a block-based file system

**Programming Language Interpreter**
- Designed and implemented a toy language interpreter in OCaml, supporting dynamic semantic evaluation, type checking, and type inference

## SKILLS

**Programming Languages:** Python, C++, Java, JavaScript
**Technical:** Visual Studio Code, Git, Cursor, Microsoft Office Suite
