

Yungong Wang

Email: wangyungong0@gmail.com | Phone: +1 626-592-3892 | Santa Barbara, CA

EDUCATION

University of California, Santa Barbara

Sep 2022 – Jun 2026

Bachelor of Science in Computer Science (GPA: 3.97 / 4.0)

- Relevant Courses:** Artificial Intelligence and Machine Learning, Computer Architecture, Advanced Application Programming, Computer Organization and Logic Design, Intermediate Object-oriented Programming, Data Structure and Algorithm Analysis, Computer Communication Networks

PROFESSIONAL EXPERIENCE

PwC Global Technology Solutions (GTS)

Jul 2025 – Sep 2025

IT Support Intern

Beijing, China

- Configured operating systems, deployed enterprise software, and provided daily technical support for employees; conducted hardware diagnostics and assisted with IT asset management
- Designed a pipeline-style configuration process to support a large-scale onboarding project, reducing idle time and improving workflow efficiency across detection, installation, and deployment
- Supported the preparation of 400+ computers for incoming employees within two weeks, finishing several days ahead of schedule and ensuring smooth organizational onboarding

Minidata

Jul 2024 – Dec 2024

Machine Learning Intern, Computer Vision

Remote

- Developed a neural network model for textile defect detection using LeNet-5 and ResNet-34 architectures, improving accuracy by 15%
- Expanded the dataset by collecting and categorizing 1,000+ textile images, manually creating defects to optimize the model's generalization ability
- Applied saliency maps to test model reliability and performance, iteratively refining the dataset and model structure

RESEARCH EXPERIENCE

Game AI Decision Intelligence

Jul 2024 – Present

Research Assistant, Peking University

Remote

- Publication:** HLSMAC: A New StarCraft Multi-Agent Challenge for High-Level Strategic Decision-Making
Xingxing Hong, Yungong Wang, Dexin Jin, Ye Yuan, Ximing Huang, Zijian Wu, Yirui Rao, Wenxin Li
(Accepted at AAMAS 2026)
- Designed a benchmark to assess high-level intelligence in multi-agent systems based on the StarCraft II game, which consists of 15+ game maps with strategic elements from “The Thirty-Six Stratagems”, focusing on AI's ability to comprehend human semantics, spatial reasoning, and task adaptation
- Implemented 4,000+ lines of Python code extending SMAC with factory-pattern modules via PySC2/sc_pb; developed stable environment-agent interfaces for 12 new scenarios
- Integrated 21 mainstream MARL algorithms (QMIX, VDN, COMA, etc.) into PyMARL, executed large-scale server experiments, and organized performance data

ACADEMIC PROJECTS

Color Modification with InstructPix2Pix Fine-Tuning

Apr 2025 – Jun 2025

- Built a dataset of 1,000 paired samples using Python scripts, leveraging PASCAL VOC and COCO annotations
- Developed Pytorch fine-tuning code for InstructPix2Pix, improving model performance on color modification and resolving outdated functions
- Integrated a BERT classifier to distinguish prompt types between the fine-tuned and original model, achieving a balanced outcome across multiple scenarios

Course Calendar Integration Tool

Jan 2025 – Mar 2025

- Integrated Google Calendar API to enable the web app to normally process user input and ensure the accurate course event creation and automatic course scheduling
- Used Jest and React Testing Library to develop unit and integration tests to validate the web app's functionality
- Designed a virtual database to store course and student user data and implemented JSON-based data generation in Python to simulate real-world user interactions before acquiring the official university course API

Happy Cows Game Enhancement

Sep 2024 – Dec 2024

- Developed a new entity and corresponding CRUD operations for an announcement feature to enable all players to post public announcements on the homepage
- Designed and implemented a new front-end feature, the announcement card component, to display player announcements in a user-friendly format
- Wrote extensive unit and integration tests to validate the new function and also improve test coverage for legacy code in order to ensure the game's overall reliability

SKILLS & LANGUAGES

Languages: Chinese (native), English (fluent)

Programming Languages: Python, C++, Java, JavaScript

Technical: Microsoft Office Suite (Word, Excel, PowerPoint), Visual Studio Code, Git, Cursor
